

UNICA  GLEMGAS

The leading italian cookers. Since 1959.

Cooking excellence made in Italy

Glem Gas was established in 1959 in Modena, in the heart of Emilia Romagna. The company proudly embodies the culinary excellence of the region and its artistic tradition. The people of Emilia Romagna have a passion for their land, a spirit of innovation and a long history of craftsmanship. At Glem Gas we offer added value through aesthetics, technology and functionality. Our main goal in over half a century in the business is to be "Cooking Specialists". Our products are high performing, versatile and reliable. They are made to last and to be easy to use. We design them to exceed your expectations.

MADE IN ITALY

Unique and functional

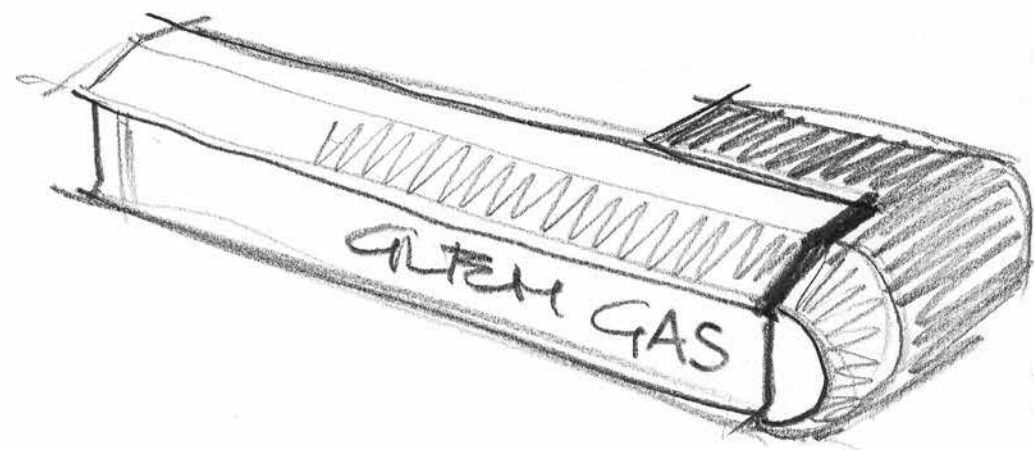

Innovative and refined. The new Glem Gas cookers are high-tech products designed to meet the most modern trends and needs of contemporary living so as to bring forward and interpret the very demanding customers needs.

The shape and the details as well as the robust and functional structure are the key players which create a cooker that is a real piece of furniture, by assuring an outstanding customised kitchen.

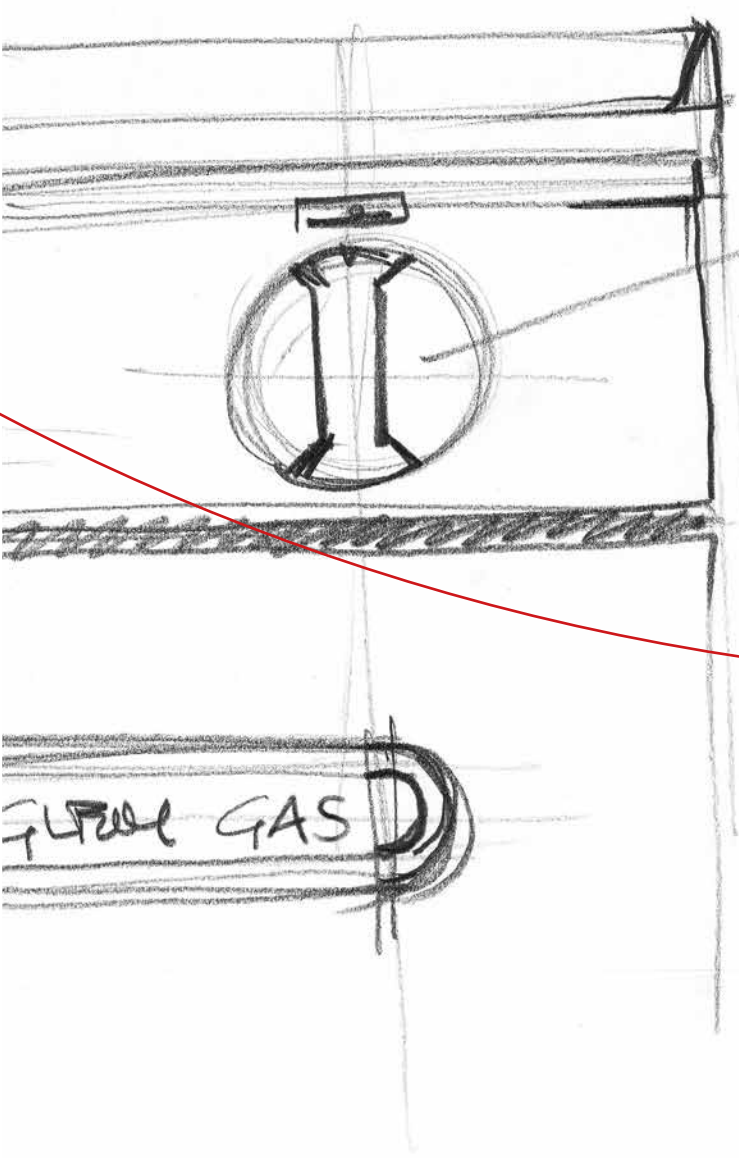

We created a new interpretation of free standing cookers. It is a blend between tradition and modernity. This unique approach has been given industry recognition through Glem Gas being awarded one of the most significant international design awards in the industry: The Menzione d'Onore of the XXII Premio Compasso d'Oro ADI (Mention of Honour of the XXII Compasso D'Oro ADI awards).

ADI Design Index is the annual publication of ADI
Associazione per il Disegno Industriale (Industrial Design Association)
that collects the best Italian design put into production.

functions and features

OVEN WITH FAN

The fan in the back wall of the oven operates to evenly distribute the heat. It provides a rapid and consistent cooking environment. It also allows for baking using more than one shelf at the same time. Used at lower temperatures the fan improves the oven efficiency which save energy while cooking perfectly. Available in the electrical and gas oven (see below).

COLD DOOR

The external temperatures are reduced thanks to the new oven door. The innovative extraction chimney considerably increases the air flow circulation inside the oven door so as to have external temperatures very low.

BUILT-IN

All Glem Gas cookers are approved to be built into your kitchen cabinetry according to the European Building-in Homologation (UNI EN 30-1-1 class 2). No space required between the bench and the cooker.

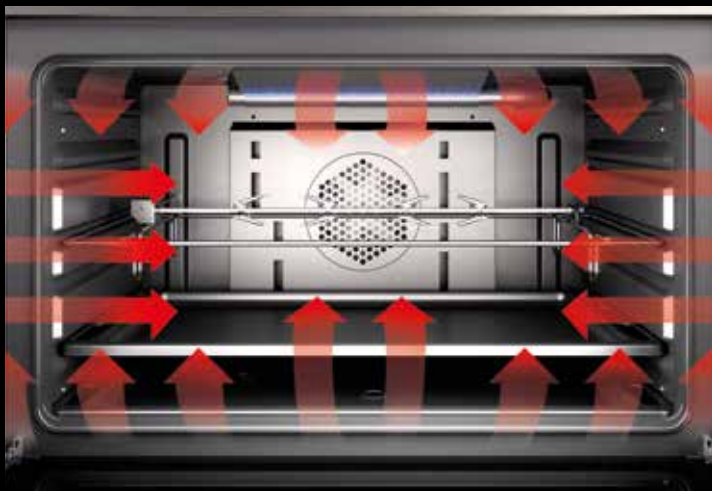

129 LT VOLUME CAPACITY

The size of the oven cavity has always been a feature of Glem Gas cookers. The capacity (in litres) of our ovens is among the largest in the market. We pay particular attention to the width of the cavity so as to allow the use of the largest baking dishes.

FULL SAFETY

Security valves for cooktop, oven and grill burners.
Ignition for cooktop, oven and grill burners.

Multifunction gas oven with fan The great advantages of this combination

- Cooking time is reduced up to 20% compared with normal gas cookers
- Uniform distribution of heat inside the oven cavity
- Two cooking levels simultaneously
- Optimisation of space and cooking time
- Energy saving
- Homogeneous cooking with no burnt areas

The turnspit (standard feature) is ideal to grant the traditional way of cooking.

OVEN LIGHT

The oven light illuminates the cooking process.

UPPER ELEMENT

This function allows direct cooking. Very good for cooking au gratin.

BOTTOM ELEMENT

Ideal for cooking pies and to give a final touch to the cooking.

TRADITIONAL COOKING

The heat is given by the bottom and upper oven elements. Ideal for pastry cooking and traditional recipes.

TRADITIONAL COOKING + TURNSPIT

Traditional cooking with turnspit.

BOTTOM ELEMENT WITH FAN

The heat of the bottom element is spread through the fan. Ideal for soufflés.

FAN ASSISTED

The heat given by the bottom and upper oven elements is spread through the fan.

UPPER ELEMENT + TURNSPIT

This function allows direct cooking. With turnspit.

BOTTOM ELEMENT + TURNSPIT

The turnspit turns meat while the bottom element roasts from below.

GRILL

It is used to cook "au gratin". Ideal for cooking "thin" meat.

GRILL + TURNSPIT

Ideal for grilling.

DOUBLE GRILL WITH FAN

Ideal for grilling meat and for cooking fish.

BOTTOM GAS

Traditional gas cooking.

GAS WITH FAN

The fan evenly spreads the heat produced by the gas burner throughout the cavity.

BOTTOM GAS + TURNSPIT

Ideal for even cooking.

BOTTOM GAS + TURNSPIT WITH FAN

The gas with fan function is combined with turnspit.

UPPER GAS

Traditional gas cooking.

UPPER GAS + TURNSPIT

Ideal for baking meats.

Unica

something different

The design of the Unica aims to introduce an aesthetic evolution on its segment. Developed in conjunction with Marcello Cutino, BCF design, represents the result of a continuous interaction between home design and traditional Glem Gas style.

1 FULL FLAT INNER DOOR GLASS. Essential design in a brilliant titanium colour. The smooth inner part of the oven door gives not only a clean look, it makes cleaning so much easier. **2 MATT FINISHING.** The new matt black pan supports give more solidity and richness to the cooktop. Furthermore, the new matt and porous finishing acts as anti-slip for all the saucepans. **3-4 FULL FLAT PAN SUPPORTS.** The pan supports of Unica range have been designed to make easier their use. The full flat and levelled shape allows the saucepans to slide from one burner to another so as to prevent them from tipping over. All the differences in height have been deleted so as to have a functional and uniform cooking surface. **5 LEADING EDGE DESIGN.** The full width handle on the oven door offers a sleek horizontal element to the aesthetic that well integrates with modern kitchen design. The side panels create a better balance to the frontal view. A lower control panel and higher hob profile give more personality to the Unica series.

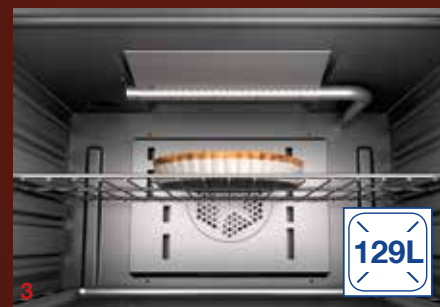

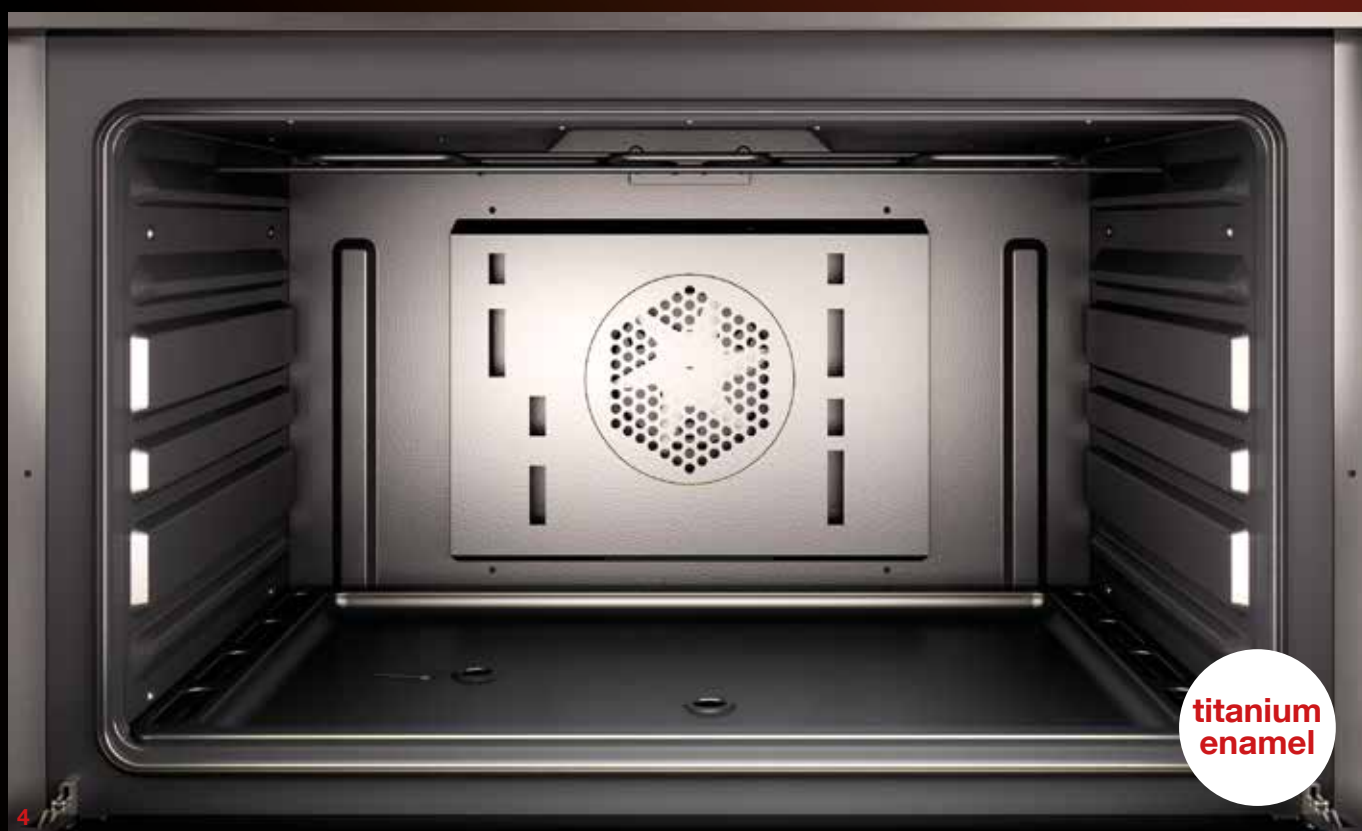

Unica

a step forward

Functionality and practicality are our main aims when we develop our products. The synergy between design and technology allows to anticipate and meet our customers' needs in order to develop a product easy to clean and, at the same time, professional for cooking.

1 COLD GLASS. The innovative conception of the oven door allows the inner air flow to make the surface temperatures more suitable and the kitchen more pleasant. **2 MULTIFUNCTION GAS OVEN WITH FAN** Glem Gas has created an innovative oven which combines all the features of an electric multifunction oven with those of a gas oven. The traditional cooking of the gas oven, ideal for roasting and baking, together with a forced ventilation provides a great heat distribution for single and multi-level cooking. More recipes in less time and with less consumption. **3 129 LT VOLUME CAPACITY** A single oven cavity, large and spacious. The wide space and capacity guarantee different ways of cooking. Perfect for those who want professionalism in the kitchen. **4 TITANIUM ENAMEL EASY TO CLEAN.** Thanks to the low porosity of the titanium enamel, cleaning is so much easier and reduces dirt build up. The titanium enamel is resistant to the attack of acids and maintains its colour over time even after intensive use. The brightness of the titanium enamel gives more room and widthness to your oven.
