QUIETAIR™
OFF BOARD RANGEHOOD SOLUTIONS BY GLEM

There's nothing quite like the kitchen. It's a meeting place, a place to excel, a place to relax, a place to share. A true comfort.

Rangehood Selection Tips.

On Board or Off Board Fan Motor

Quiet Air rangehoods have the advantage of almost totally silent operation. The fan motor is "Off Board" which means that it is located in the ceiling cavity. In apartments or homes without a space above the ceiling Quiet Air rangehoods cannot be used. The Air Friendly On Board range is designed for all installation applications.

Size and design

Try to always select a rangehood that is at least as wide as your cooktop. Your cooking style should be considered, for example stir frying requires a higher rate of air extraction.

Stainless steel baffle filters

This design of filter not only looks good but they catch and hold the moisture in the air stopping it dripping back into your cooking. They are ideal for use over induction cooktops.

LED lights

LED lights have extremely low electricity consumption and are very durable. They are not only perfect for illuminating the cooking process but they provide subtle lighting of the kitchen.

Ducting

It's important that your rangehood has the right ducting to allow the exhaust to be efficiently expelled to the outside. Your choice of ducting impacts the noise of the rangehood and how well it operates.

Solid or semi rigid ducting works best but can be harder to install. We don't recommend non laminated foil ducting as it leads to increases in noise and losses in efficiency. We supply laminated flexible ducting for the Quiet Air rangehoods.

Recirculating

When a rangehood is installed in recirculating mode (which means it is not ducted to the outside) carbon filters are used to remove cooking odours. The carbon filters need to be replaced on a regular basis. **Quiet Air rangehoods cannot be recirculated.**

High ceilings

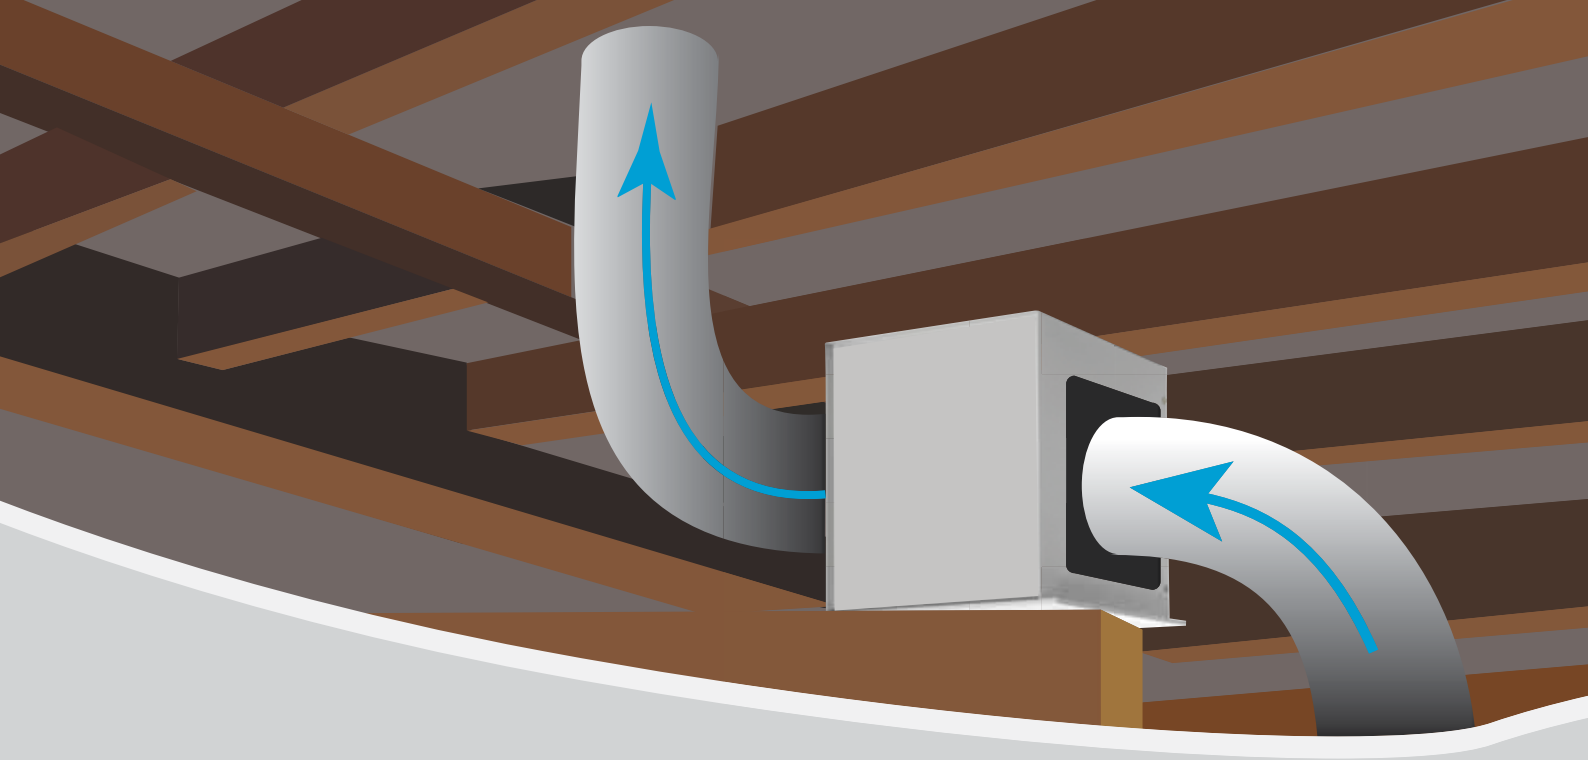

Contact us on 1300 307 917 and ask for After Sales Service to check on the availability of extension chimneys (shrouds) to suit higher ceilings.

Takes the noise out of the kitchen

Open plan living makes the kitchen more than a food preparation zone and a noisy rangehood is an unwelcome intrusion. Glem Quiet Air rangehoods are silent. Just the quiet sound of air flowing through the filters.

Suitable for easy installation in any home that has a ceiling space above the kitchen.

Powerful Extraction

1200m³ of air is extracted per hour. All models. This is not by chance, we know that this is a great extraction rate to use in Australian kitchens.

Led Lighting

LED lights with a total consumption of 6W. Bright, efficient and long lasting.

Stainless Steel Filters

Stainless steel baffle filters last a lifetime and are dishwasher safe for easy cleaning. They catch excess moisture from the cooking process and stop it dripping back into the food.

Perimeter Extraction

On the flat rangehood models, the "T Bars", we use perimeter extraction to increase the area of extraction over the cooking area. The stainless steel plate hinges down to provide access to the mesh filters above. Easy to clean, beautiful and stylish.

Ease of Installation

Installation fittings are included. All that is required are some tools, duct tape and expertise. The ceiling space installation stops the need to clamber around on the roof. We don't supply the external vent because every house is different.

Service

Quiet Air rangehoods benefit from the National Service program of Glem Gas Australasia Pty. Ltd. There is always a Service Agent when you need one.

Off Board Rangehood Collection

90cm Slim Line Canopy.

GQA90SC

Functions and Features

1200 cubic metres per hour extraction

Ceiling cavity motor for silent operation

Low consumption LED lights x 3

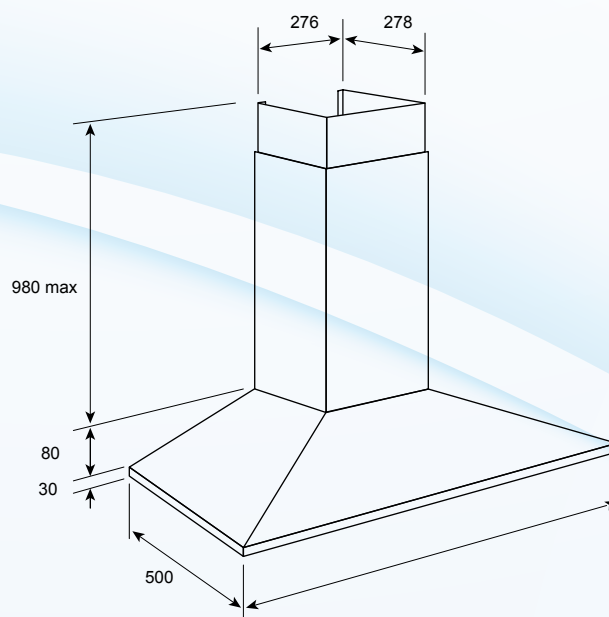

Outlet diameter 150 mm
